Anyone who uses the Sega Dreamcast should read the operating manual for the software and console before operating them. A responsible adult should read these manuals together with any minors who will use the Sega Dreamcast before the minor uses it.

HEALTH AND EPILEPSY WARNING

Some small number of people are susceptible to epileptic seizures or loss of consciousness when exposed to certain flashing lights or light patterns that they encounter in everyday life, such as those in certain television images or video games. These seizures or loss of consciousness may occur even if the person has never had an epileptic seizure.

If you or anyone in your family has ever had symptoms related to epilepsy when exposed to flashing lights, consult your doctor prior to using Sega Dreamcast.

In all cases, parents should monitor the use of video games by their children. If any player experiences dizziness, blurred vision, eye or muscle twitches, loss of consciousness, disorientation, any involuntary movement or convulsion, **IMMEDIATELY DISCONTINUE USE AND CONSULT YOUR DOCTOR BEFORE RESUMING PLAY.**

To reduce the possibility of such symptoms, the operator must follow these safety precautions at all times when using Sega Dreamcast:

- Sit a minimum of 6.5 feet away from the television screen. This should be as far as the length of the controller cable.
- Do not play if you are tired or have not had much sleep.
- Make sure that the room in which you are playing has all the lights on and is well lit.
- Stop playing video games for at least ten to twenty minutes per hour. This will rest your eyes, neck, arms and fingers so that you can continue comfortably playing the game in the future.

Power Gauge System

The power gauge systems vary in the Advanced Mode and the Extra Mode.

◆ Advanced Power Gauge

In the Advanced Mode, the power gauge in the lower half of the screen increases with each Special Move used. When it becomes full, a yellow Power Stock will light up to the right of the gauge (one "power stock"), enabling the use of a Super Special Move.

Up to 3 "power stocks" can be kept. Push the X, Y, A Buttons simultaneously when power stocks are illuminated to temporarily increase your character's power to MAX (MAX Power Activation). If more than one power stock remains when using the MAX Power Activate, use a MAX Power Super Special Move.

◆ Extra Power Gauge

In the Extra Mode, push down the X, Y, A Buttons down simultaneously to increase the power gauge in the lower half of the screen (Power Build). When the gauge becomes full, your character automatically enters the temporary MAX Power Condition, enabling the use of Super Special Moves. If the Life Gauge is also flashing in this condition, you can use a MAX Power Super Special Move.

◆ Advantage System

In this game, when a character loses in the Team Play Mode or Team VS Mode, the Advantage System gives the second and third players an advantage over opponents.

In the Advanced Mode, the number of power stocks that can be kept increases to five, and it becomes easier to use MAX Power Super Special Moves. Furthermore, in the Extra Mode, the length of the power gauge is shortened, making it easier to increase power.

*By changing settings in the "BATTLE CONFIG." Menu of the Option Mode, games can be played without the Advantage Mode (see p. 21).

◆ Back-Up Attacks

When the conditions listed below are met in team battles, push the X, Y, A Buttons simultaneously to have other team members jump in for a "Back-Up Attack."

The chances of receiving help, however, varies with compatibility among other team members.

- When a character is knocked out or grabbed by an opponent.
- When other teammates still remain to fight.
- When teammates waiting for battle can be seen on the screen.

*If the compatibility of teammates is good, the percentage of getting a "Back-Up Attack" is 100% if the above conditions are met; 50% if compatibility is normal; and nonexistent if compatibility is bad.

COMPETITION RULES

TEAM

◆3-ON-3 TEAM BATTLES

- 1 Each team's starting member begins to fight in a one-round match.
- 2 When the first member is defeated, the second member enters the battle. The victor remains to fight with the same power meter level reading at the end of the previous battle. (The victor's strength level is restored slightly with a victory bonus and time bonus.)
- 3 The first team to defeat all opponents wins and proceeds to the next match.

SINGLE

◆1-ON-1 SINGLE BATTLES

The first character to win two out of three rounds wins the match. During matches, both participants' power levels are restored as each round is decided, and action moves on to the next round. The number of rounds needed to win a match can be changed with the "BATTLE CONFIG." Menu of the Option Mode (see p. 21).
